## **DETAILED ACTION**

### ***Election/Restrictions***

1. Applicant's election with traverse of method claims 1-10 and 21-30 in the reply filed on June 7, 2007 is acknowledged. Applicant's arguments are deemed persuasive. Accordingly, the restriction requirement set forth in the Office action mailed June 4, 2007 is hereby withdrawn. A new restriction requirement is set forth below.

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7, 10-17, 20-28, and 31-38, drawn to monitoring a recording/reproducing operation by analyzing noise frequencies, classified in class 360, subclass 31.
- II. Claims 1, 2, 8, 9, 11, 12, 18, 19, 21, 29, 30, 31, 39, and 40, drawn to measuring a change in fly height by monitoring the resistance of an magneto-resistive head, classified in class 360, subclass 75.

The inventions are distinct, each from the other because of the following reasons:

3. Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require monitoring the frequency of media noise, by for example Fast Fourier Transform or spectrum analyzing processes. The subcombination has separate utility such as detecting head wear by analyzing a frequency spectrum of media noise.

The examiner has required restriction between combination and subcombination inventions. Where applicant elects a subcombination, and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

4. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

5. A telephone call was not made to request an oral election to the above restriction. Applicant is advised that the reply to this requirement to be complete must include (i) an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the

Art Unit: 2622

inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Daniell L. Negrón whose telephone number is 571-272-7559.
